

AFC

Leading the Industry with Fine Coating and Finishing Equipment

Office Furniture by Styline (OFS); Huntingburg, IN

***Thirty years in the
coating equipment
industry brings you
the most advanced
technology available.***

AFC Specializes in State of the Art Coating and Finishing Equipment

Foremost in Design and Technology

AFC builds a large variety of finishing and process equipment for high solids, water borne and electrostatic applications.

AFC offers the highest airflow on the market allowing for a very high quality finish. We supply application equipment with three basic air flow patterns:

The Full Downflo – air flows straight down from a filtered intake ceiling into a basement or “pit”.

The Side Downflo – air flows down from a filtered

intake ceiling and then to the sides near the bottom. **The Crossflo** – air flows from end to end.

We have made equipment for motor home and bus manufacturers, aircraft applications, N.A.S.A., a railroad, and furniture manufacturers. AFC can meet your size requirements for most any application.

AFC equipment is constructed of 18 gauge galvanized steel which extends the life to five times that of ungalvanized steel. Overlapping/interlocking flanges make AFC equipment rugged and reliable.

AFC Means Quality and Customer Satisfaction

AFC products have been designed by industry wise craftsmen with quality, safety, and efficiency in mind.

The superior airflow in AFC products provide a safer work environment for the operator, pulling contaminants quickly away from the operator.

The long history of AFC is a testimony to the success of a company that stresses customer satisfaction, service, and quality.

☛ *Size and style has no bounds at AFC. We can meet size requirements for most any application.*

AFC Provides Customized Products for Industry

Whether you have a need to coat an airplane, motor home, train, furniture, or trash bins, AFC can meet your demand. AFC has a solid reputation for craftsmanship and quality. Our equipment provides the best lighting available for operator comfort. Whether you need a continuous or batch system, AFC has filled similar production area needs. You can custom order your equipment to match your specific installation.

At AFC, we manufacture our own electronic controls and our own heat systems. We provide heat systems to maintain spray temperature as well as systems to dry-off and cure the applied material. We can custom design ovens for any industrial process. We use only state of the art industrial grade components on our control systems. We utilize digital equipment as well as easy to use touch screen controls which automate the application and curing operations.

Safety Standards and Code Compliances

All models are constructed to standards of the National Board of Fire Underwriters for coating equipment, as recommended by the National Fire Protection Association (NFPA33), Occupational Safety and Health Administration (OSHA) standards, and Environmental Protection Agency (EPA) requirements. All models use components that are National Electric Manufacturers Association (NEMA) rated, Underwriters Laboratories (UL) approved, and Edison Testing Laboratories (ETL) listed. Standard components and accessories are available to comply with any special state or local code requirements.

➡ AFC offers free layout and design. We have helped a long list of premier facilities improve work flow.
